

Movius for BlackBerry® UEM

Communicate seamlessly with clients, extract intelligence and best practices, and stay compliant- all within BlackBerry® UEM.

Movius for BlackBerry® provides secure and compliant calling and texting through a separate mobile phone number and app on your employee's corporate or personal device. All communication data is captured and sent to your archive or CRM so you can engage with clients with greater efficiency and immediacy while minimizing your firm's compliance, legal, and reputational risk.

The solution is fully integrated with BlackBerry® UEM, providing additional security features and policy controls required by global firms today. Together, Movius and BlackBerry deliver a seamless user experience with easy access to secure business applications on the employee's mobile device while utilizing Movius for secure voice and text through a separate business number.

BENEFITS:

Seamless Experience for Users

Provides single sign-on and click-to-dial and click-to-text within BlackBerry® Work Email, Calendar and Contacts.

Security and Control for IT

Deploy and control access to the Movius for BlackBerry app as you do for any other BlackBerry® Dynamics app. The solution uses the BlackBerry® Dynamics Data Loss Prevention (DLP) framework.

Centralize client communications through a single app in your BlackBerry® UEM container

Product Features

Secure Business Number

Separate app, dialer, contact list, caller ID, voicemail, SMS and call logs, do not disturb and scheduler.

Voice and Text Capture

Option to record just voice, just SMS, or both - over any connection, Wi-Fi, data or cellular. Enjoy multiple recording, storage and retrieval options.

Compliant Texting

Securely communicate with clients more efficiently with SMS with ability to create automatic workflows to capture client consent and redact certain keywords or phrases.

Supervision Workflows

Audit trails, lexicon alerts and reports help compliance and mobility teams meet obligations and maintain visibility across all business voice and text.

TCPA Opt-In, Opt-Out

Set up rules that trigger request for positive client consent for communication approval prior to engaging over text messaging.

Seamless Integrations

Capture voice and text with zero disruption to the workflows of end users and send data seamlessly for transcription or to your archival platform or CRM of choice.

Lexicon Alerts

Define list of lexicon terms and set workflows to redact or block outgoing messages based on rules with real-time alerts and reports for risk governance and supervision.

Administrative Control

Add users, manage mobile numbers, view call records, and configure policy controls – all from a simple, admin portal.

Movius for BlackBerry® Integrated Features
